During the development of the Softshell jacket, care was taken to achieve weather resistance at moderate temperatures while at the same time ensuring the appropriate freedom of movement. Protection against rapid cooling (windproof thanks to GORE windstopper membrane) combined with high respiratory activity are the most important properties that are required. Even with light showers, high-quality softshell fabrics can easily keep the wearer dry, but are not a complete substitute for rain protection gear. In combination with base layers, the Softshell multifunctional jacket is highly versatile and also allows activities in the range of +5 ° C due to the increased freedom of movement.

SOFTSHELL JACKET SPEZKR
